

## **CARE AND MAINTENANCE INSTRUCTIONS**

An abbreviated version of the following instructions also appear on a sticker located on the vanity top surface which is to be removed only by the homeowner or occupant.

1. To Clean - For High-Luster finish use only a mild non-abrasive liquid or foam cleaner, such as Dow Spray Tub and Tile Cleaner or Lysol Basin Tub and Tile Cleaner. For Matte finish mildly abrasive cleansers such as Bon Ami may be used to clean and maintain finish.
2. To Polish - We recommend periodic use of the commercial liquid product "Gel Gloss", as manufactured by TR Industries, South Gate, CA. After hand-polishing the top with Gel Gloss or automotive paste wax, a final application of the spray product "**TERE-STONE**<sup>®</sup> Polish and Surface Guard", available through your local distributor, will provide a finished high-luster surface.
3. CAUTION - Check your water temperature - water temperature in excess of 150 degrees F can damage this surface. Do not use instant hot water dispensers.
4. Remove minor scratches from High-Luster finish with the liquid commercial product "Gel Gloss". When encountering more severe scratches, first attempt to remove them using a rag and DuPont "No. 7" white auto polishing compound. If scratches persist, follow Taylor Industries "Buffing Out Surface Scratches".
